AUS 46

THE NEW ZEALAND ENTOMOLOGIST

GENERAL INDEX TO VOLUME 4

This index has been compiled on the following principles:

1. Every statement of knowledge about a species of Arthropoda is indexed under the generic name, usually with the specific name. (If more than one species of a genus is covered in a paper, the index reference may be given only as the generic name, e.g. "**Melanchra** spp.").

2. Under family names of Arthropoda, the names of genera contained in the index are listed.

3. The only exception to principles 1 and 2 is the paper by Given listing insects from Niue Island (no. 1:40). To index this paper (a list without any other information) fully would have increased the length of the index unacceptably.

4. New additions to the New Zealand fauna are listed (under "New Zealand"). The attention of authors is drawn to the importance of stating clearly if a record is new for the fauna.

5. Subject indexing has been based on the entire contents of each paper (i.e. it has gone deeper than selecting "key words" from titles).

There has been considerable confusion arising from the varying number of parts of volumes of the journal. Volume 1 contained five numbers; volume 2 contained six numbers; volume 3 contained five numbers; and volume 4 contained four numbers. Each number was separately paged. It is intended that volume 5 and subsequent volumes will each contain four numbers, which will be paged consecutively within each volume.

J. C. WATT, Editor.

	No.	Page
Abgrallaspis cyanophylli; new N.Z. record	1:	46
Acanthoxyla spp.; variation, biology	3:	70
Acarapis vagans; on **Apis mellifera** — new N.Z. record	3:	136
Acari; knowledge of N.Z.	3:	56
Acrididae; biogeography	3:	17
Actizeta albata; biology, Canterbury	2:	48
Adaptations; aquatic in **Desiantha** larva	4:	7
Adistemia watsoni; new N.Z. record	2:	57
